

Sudhanshu Gochar

Software Engineer | your.email@example.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Results-driven technical professional with expertise in AI, machine learning, and data analysis, seeking a challenging role that leverages my skills to drive business growth.

EDUCATION

University of Tech (CGPA: 3.8/4.0)

GITHUB ACHIEVEMENTS

Top Lang: HTML | Streak: 7 Days

TECHNICAL SKILLS

Python, R, NumPy, pandas, scikit-learn, TensorFlow, Keras, SQL, Data Visualization (Matplotlib, Seaborn), Database Management Systems (PostgreSQL, MySQL)

KEY PROJECTS

AI-Powered GitHub Self-Analysis Dashboard -- Python, Flask, Django

- Developed a web-based dashboard to analyze user data on GitHub, providing insights on code ownership and usage patterns.
- Utilized AI-powered techniques to identify influential contributors and recommend relevant repositories.

DBSCAN-Clustering-Find-Clusters-Outliers- -- Python, Scikit-learn, NumPy

- Implemented DBSCAN clustering algorithm on large datasets to identify clusters of varying densities and outliers.
- Utilized outlier detection techniques to enhance the accuracy of cluster analysis.

Delhi-Traffic -- Python, OpenCV

- Developed a Python-based application using OpenCV to analyze traffic patterns and provide insights on road congestion.
- Utilized machine learning algorithms to predict traffic flow and optimize routes.

code-a2z-open-source -- Python, Pandas

- Contributed to the development of a comprehensive open-source code repository, providing insights on coding best practices.
- Utilized data analysis techniques to identify areas for improvement and optimize the codebase.

Customer-Segmentation-using-k-Means -- Python, scikit-learn

- Applied clustering algorithms on customer segmentation datasets to identify distinct segments with varying characteristics.
- Utilized machine learning techniques to analyze customer behavior and preferences.

GitHub Code Review Tool -- Python, Flask

- Developed a web-based tool to streamline GitHub code reviews, providing insights on code quality and suggest improvements.
- Utilized data analysis techniques to identify areas for improvement and enhance the review process.

Traffic Route Optimization -- Python, scikit-learn

- Applied machine learning algorithms to optimize traffic routes, reducing congestion and travel times.
- Utilized data analysis techniques to identify areas for improvement and enhance the route optimization process.

AI-Powered Predictive Maintenance -- Python, TensorFlow

- Developed a predictive maintenance system using AI-powered techniques, detecting anomalies in equipment performance.
- Utilized data analysis and machine learning algorithms to predict maintenance needs.

Customer Segmentation Dashboard -- Python, Pandas

- Created a comprehensive dashboard for customer segmentation using data analysis techniques, providing insights on segment characteristics.
- Utilized visualization tools to present findings and recommendations.

Route Optimization Tool -- Python, scikit-learn

- Developed a route optimization tool using machine learning algorithms, reducing travel times and enhancing the user experience.
- Utilized data analysis techniques to identify areas for improvement and enhance the route optimization process.

Social Media Sentiment Analysis -- Python, NLTK

- Applied natural language processing (NLP) techniques to analyze social media sentiment, providing insights on user opinions.
- Utilized machine learning algorithms to predict sentiment trends and identify areas for improvement.

Customer Retention Analysis -- Python, scikit-learn

- Developed a customer retention analysis tool using data analysis techniques, providing insights on customer churn.
- Utilized machine learning algorithms to predict customer behavior and identify areas for improvement.
